We do not guarantee a predetermined depth, quality, nor quantity of water prior to commencing drilling and have only utilized the above depths as cost examples. Well depths may be less than 200 feet and greater than 400 feet. Steel casing shown above must be set down into solid rock. Therefore, we may use more or less than is estimated. Casing drive shoes and casing liner seals are not included in estimates since they are only needed in problem wells and are not considered standard costs. The estimated costs above for Pump Systems are dependent on the uses and demands each homeowner may require. Therefore, the estimated price may increase or decrease depending on certain variables. The above prices are subject to change at any time. The above prices are only good for 7 days, and after that we must quote at the time of drilling due to increasing costs of steel, gas, and fuel.
